Subject : Microsoft Emulation Exam Suspension
Date : June 1, 2010

Please Take note of the following important information relating to the Microsoft Emulation exams:

Message

In the last several weeks, some candidates and partners have had difficulties registering for the TS: Windows Server 2008 Active Directory, Configuring exam (083-640, 094-640, 096-640), whereas others have had performance issues with the delivery of their exam. While we were able to make significant improvements to the scheduling system, we are seeing more performance issues than are acceptable. Due to these performance issues, Microsoft and Prometric have decided to suspend the Emulation version of Exam 640 from the market. We will replace the lab-based questions with equivalent non-lab based questions. We are not changing the Objective Domain or skills and abilities that are measured to earn this certification.

All future emulation bookings will be automatically switched to traditional exams (070-640, 072-640, 073-640). In an effort to ensure this process is successful, please be sure to run Pulse before you begin your operations on Wednesday, June 2, 2010. If you still find 083-640, 094-640, 096-640 exams in your roster after running Pulse, please contact the Global Helpdesk for assistance.

This applies to all sites currently or considering delivery of the emulation exam.

Thank you.
